

Cary

I installed the NL4-PP today. It took 5 minutes. I Velcro'd the gps under the bow just forward of the windscreen.

It works perfectly.

We were skurfing at 10 mph today and it held speed exactly. With the old speed wheel it would surge badly at that speed.

Our wakeboarding speed has increased by 2 mph, but that would prove the inaccuracy of the speed wheel.

I would (and will) recommend the NL4PP to anyone wanting to change their Perfect Pass to GPS speed control, without the expense of a genuine Perfect Pass upgrade.

Thanks for your help and thanks for the good price.
